

ALEJANDRO GÓMEZ

Junior Software Developer

Alicante, Spain | +34 626 33 95 51 | alexgl.dvp@gmail.com | LinkedIn: linkedin.com/in/alex-gomez-lo

PROFESSIONAL PROFILE

Junior Software Developer and Multimedia Engineer with experience in Java backend development, relational databases, Oracle SQL, automation scripts and software maintenance. Comfortable working with debugging, refactoring, requirements gathering and code optimization, with a practical approach to building reliable and maintainable solutions.

Multidisciplinary background combining software engineering, web technologies, interactive applications, VR environments and real-time systems. Proactive, self-sufficient and eager to keep learning from professional teams while contributing to backend, frontend, database and automation tasks.

WORK EXPERIENCE

Software Developer Java

MetaEnlace - Murcia, Spain | 2023 - 2024

- Developed and maintained backend software solutions using Java.
- Worked with relational databases and Oracle SQL queries for data management and reporting needs.
- Created automated scripts to streamline internal operations and repetitive technical tasks.
- Debugged, refactored and optimized team code to improve performance, stability and maintainability.
- Collaborated with development teams following software requirements, technical specifications and structured workflows.

3D Environment Artist & Technician VR Specialist

Virtual Zone - Alicante / Madrid, Spain | 2024 - 2025

- Managed technical deployment, testing and maintenance of immersive VR experiences.
- Developed Python tools to automate workflows and improve production efficiency.
- Created and adjusted Unity shaders to improve real-time application performance.
- Solved technical issues related to VR applications, optimization and interactive environments.
- Worked with multidisciplinary tools combining software, 3D content and real-time systems.

3D Environment & Prop Artist Intern

Secret6 - Madrid, Spain | 2024 - 2024

- Worked in a technical production environment following structured pipelines and quality standards.
- Applied optimization techniques for real-time assets and videogame production.
- Collaborated with teams using digital tools, technical documentation and production workflows.

EDUCATION

Multimedia Engineering

University of Alicante | 2018 - 2023

Engineering degree focused on software development, databases, web technologies, interactive applications, videogames, multimedia systems and real-time digital content. Relevant areas include object-oriented programming, software engineering, database management, computer graphics, web development, user interfaces and application development.

Technologies and concepts: Java, C, C++, C#, JavaScript, HTML, CSS, SQL, databases, software design, computer graphics and multimedia application development.

Environment & Prop 3D Artist AAA

Voxel School | 2023 - 2024

Specialized training in videogame production pipelines, real-time engines, optimization and technical asset creation, including Unity, Unreal Engine, shaders, procedural materials and real-time performance.

English - Advanced C1

Official School of Languages | 2021

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, C#, JavaScript, TypeScript

Frontend: HTML, CSS, JavaScript, TypeScript, React, Angular

Backend: Java, Node.js, REST APIs, backend development, software maintenance

Databases: SQL, Oracle, PostgreSQL, MySQL, NoSQL, relational databases

Tools: Git, GitHub, Docker, Linux, Visual Studio Code, IntelliJ IDEA

Software Practices: Debugging, refactoring, code optimization, automation scripts, requirements gathering, problem solving

Additional Technical Skills: Unity, Unreal Engine, VR applications, shaders, real-time optimization

LANGUAGES

Spanish - Native | English - Advanced C1
